

- Perfect for small lots
- Very robust labelling machine
- Cheapest machine of the etibe product range

Self-adhesive labelling machine HKM-Prisma

etibe

etikettiertechnik in berlin

The HKM Prisma is a very affordable, sturdy self-adhesive labelling machine for front or wrap-around labels on cylindrical and conical containers. It is ideally suited for smaller quantities; loading and unloading of the containers is done by hand.

The containers are labelled in the prism roll station. The prism rolls align the containers parallel to the label cylinder and ensures very precise labelling. If required, the machine can be fitted with additional modules, such as printers, side unwinder, collecting table etc.
